

Integration Hub

Connect seamlessly with the systems of record your organisation relies on.

Bringing your organisation's critical systems together is something that often requires significant developer time and resources. UKG Ready® Integration Hub helps you take the pain out of this process and realise value from your HR solution sooner with a powerful set of tools that can handle even the most complex requirements for faster creation of both industry-standard and custom integrations.

Synchronised Information

Ensure consistency across your different systems of record and applications, whether cloud-based or on-premise, with a dynamic and flexible integration toolset that can uniquely approach and manage a variety of different information types so you always see the most accurate results.

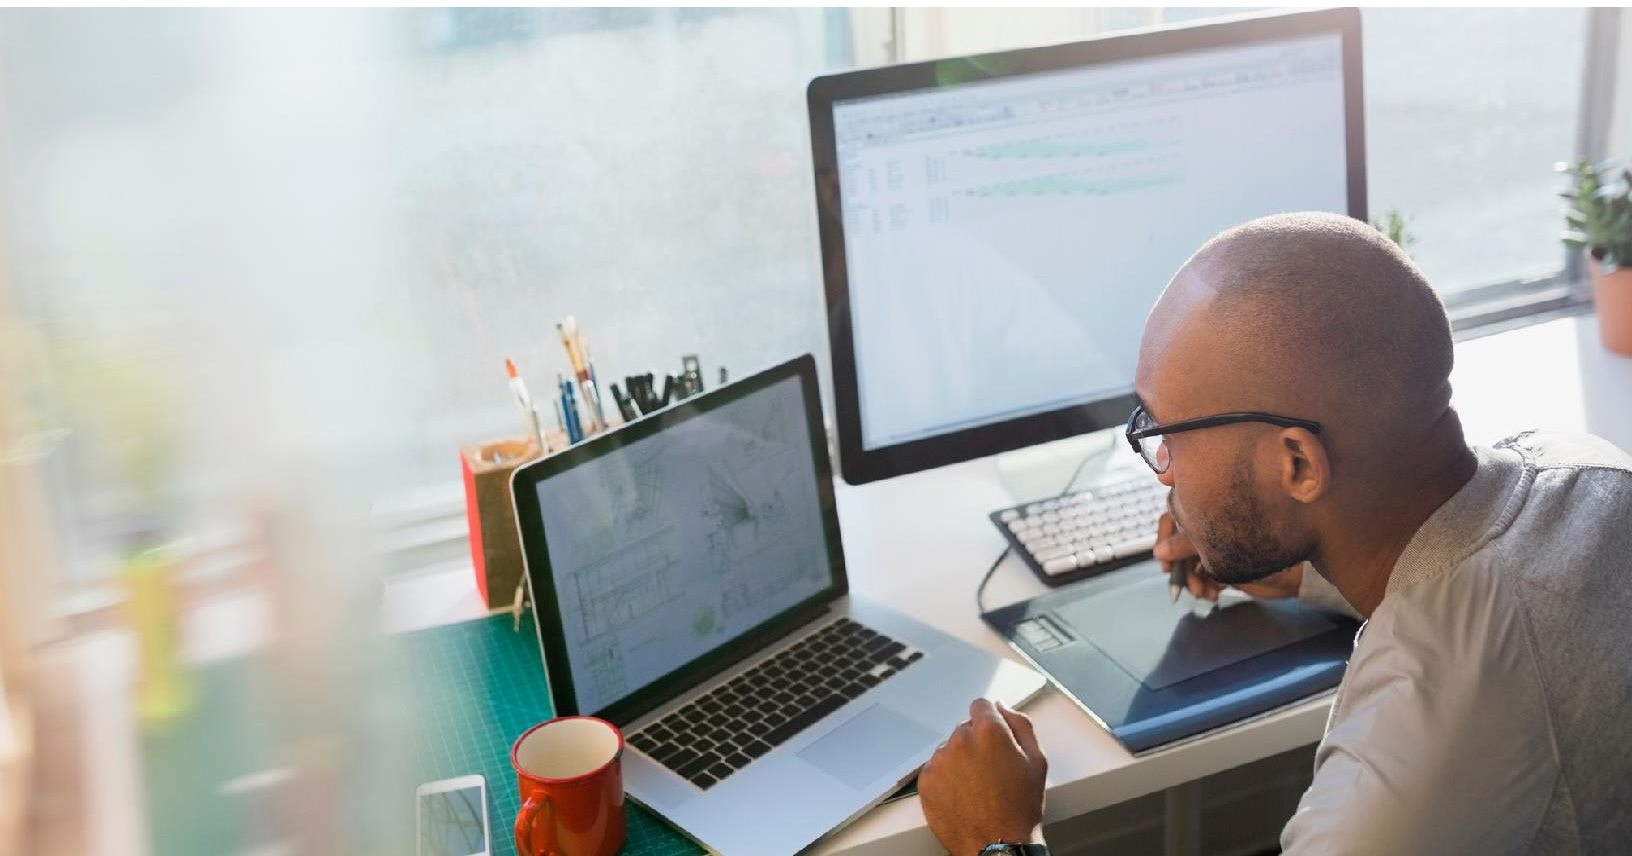

Faster Time to Value

Work with a dedicated services team to assess your unique requirements, determine the best integration strategy to meet your needs, and deliver rapid integration deployment so you get up and running with results you can trust faster.

Seamless Data Connections

Eliminate the headaches of managing separate systems, cut down on manual administration, and improve data integrity and consistency by building a connected ecosystem consolidating your most critical operations using the best interfaces for the job.

Integrations You May Recognise

Below are some of the third-party systems the Ready Integration Hub has connected with. These are just a few highlights — Ready can support a wide variety of connections through our versatile set of integration tools.

Integration Examples

- Job and/or demographic transfer to and from third-party HR systems
- Pay data and cost center transfer to and from third-party payroll systems
- ACH payroll payment for vendors such as 401(k), HSA, or wage garnishments
- Payroll journal to general ledger in one account structure
- Benefits enrollment exports
- Employee decision election imports

Integration Strategies Available

- *Ready middleware* to connect to legacy on-premise systems or automate information uploads from local networks to central servers
- *Bidirectional REST API library* to build modern, standardised connections between Ready and your other industry leading applications
- *Import/export options* to bring data into Ready using common formats like Excel and output Ready data to exportable file types for sharing
- *Boomi* to execute, automatically schedule, and report on integrations through a flexible integration platform as a service optimal for high-priority third-party connections
